INTRODUCTION:

What We Do

Solutions for Industrial and Urban Waste Water - We provide waste management from collection, reception to transportation and disposal for all types of environmental cleaning work. These include preventative, scheduled and corrective maintenance services.

We provide complete solutions for a wide range of services which include spill removal and clean up, environmental control for contract works, routine requirements for the cleaning and servicing of grit chambers, pump chambers, cooling towers, cess pit/sump emptying, storm water and sewer network cleaning, pipeline blockage removal and overflow clean up. We also specialize in retention pond cleaning.

Our vehicle mounted **Suction Machines** are capable of siphoning off the liquid and solid effluents into the equipment's sludge collection tank under high vacuum from surcharged manhole chambers, sewers and storm-water drain lines, septic/sump tank, gully pits and ETP's and transporting the same to any desired disposal site for emptying under gravity/positive pressure/ tipping of the sludge tank

We transfer and appropriately handle large amounts of disposables from your location to state certified disposal stations with safety and care.

With regular maintenance and technical support from our highly experienced team, we are always available for emergency responses, assisting you any time, day or night, throughout the year.

- Cleaning of ETP's
 - Emptying of Septic Tank
 - Cleaning & Unclogging of Manholes
 - Emptying of Drains Line
 - Cleaning of Sewer / Drainage lines
 - Cleaning of Gully / Gutters
 - Overflow Clean-Up
 - Removal of Pipe / Drain Line blockages
-

How We Do It!

Cleaning of ETP's -Cleaning and material handling of Effluent Treatment Plant (ETP) for sludge removal wherein the effluents are cleaned, transported and disposed-off safely. The sludge collected is taken to the secured landfill area for disposal. This ensures that pollution from any of the treatment processes does not get into the surroundings.

Emptying of Septic Tank

This involves sucking out the liquid waste/ flushing out sludge and scum from a septic tank using the Gully Sucker (Suction Machine). These wastes are then transported and disposed off safely.

Cleaning and Unclogging of Sewer Lines & Manholes (Domestic Waste): Chocking of Sewer Lines is a common occurrence experienced at many premises, be it homes, hotels or hospitals. We undertake cleaning of Sewer Lines and Manholes at the commercial level – hospitals, hotels, industries and municipal contracts. These wastes are then transported and disposed off safely, with the use of the Gully Sucker, a specialized tanker with a suction machine that sucks up waste by creating high vacuum.

Balaji Services-

Balaji Services is a proving its abilites in contributing to health and safety standards, with a focus on environmental cleanliness of Industrial and residential - Waste Water Management.

Balaji Services Clean is a compliant, one-of-a-kind, in the field of waste water collection, transportation, and disposal business. Efficient Management

in material handling since 2010

Offering the same quality of service and standardised support, BalajiServices is providing a comprehensive range of Waste Water Management through mechanical and chemical processes using Jetting and Vacuum equipments. Having our Head Office in Nashik offering services on pan-India basis

Equipment

Suction Machine

Our vehicle mounted Suction Unit also known as a **Vacuum Machine** or a **Gully Sucker** is the main unit having a tank capacity of 3000 litres & 6000 litres with a suction pump to effectively suck up and collect liquid, semi-solid, wet waste, sewage, sludge and slurry from a depth of about 12 feet.

The process involves blowing of pressurized air/ water into the chamber to dislodge the sediment solids, which combine with the liquefied effluent to form sludge. This is then collected into the tank by operating the system in vacuum mode. The blow back pressure mode is then utilized to stir up the sludge. These results in the homogenous mixing of the particles in the water content where all the heavier particles/ materials deposited at the bottom of the tank are brought up and kept in circulation, before commencing the suction operation. The suction operation under this stage then effectively cleans out the sludge particles stagnated in the tanks and sewer lines.

Suction process is also useful for cleaning of ETP's, shifting effluents from ETP's to effluent beds, septic tanks, clogged manholes and areas having water logging.

Salient Features

It can effectively suck up and collect wet waste, sludge, scum from sewer/drain/pipe lines, septic tanks, cesspits, etc

It is capable of cleaning clogged manholes, gutter/gullies, etc.

It works on the principle of creating a high degree of vacuum which dislodges the sediment solids that get accumulated at the bottom of the manhole chambers, sewer lines and tanks.

It is equipped with improved heavy duty Vacuum Pump, Auto Shut off valve, Siphon filter, Safety Pressure release valves and other important safety features.

Specific Suction Operation: This multipurpose machine can be used for cleaning of ETP's, cooling towers, grit/pump chambers, emptying of septic tank, overflow clean up etc

Suction Unit

1. Vehicle Type/Chassis - TATA 1109 – 17ft

Tank Cap - 6000 litres

System – Rotary Vane Compressor/ Vacuum Pump

Pump Make - Jurop Spa, Italy

Type – PN 84D

Delivery - 9000 lpm free air flow

Max Vacuum – 80 mbar (92% vacuum)

Max Operating – 200 mbar (80% vacuum)

Max Pressure – 1.5 bar

Max Operating Pressure – 1.0 bar

2. Vehicle Type/Chassis – Eicher E-10

Tank Cap - 3000 litres

System – Rotary Vane Compressor/ Vacuum Pump

Pump Make - Jurop Spa, Italy

Type – PN 32D

Delivery - 7000 lpm free air flow

Max Vacuum – 80 mbar (92% vacuum)

Max Operating – 200 mbar (80% vacuum)

Max Pressure – 1.5 bar

Max Operating Pressure – 1.0 bar

3. Vehicle Type/Chassis - TATA 1109 – 19ft

Tank Cap - 7000 litres

System – Rotary Vane Compressor/ Vacuum Pump

Pump Make - Jurop Spa, Italy

Type – PN 84D

Delivery - 9000 lpm free air flow

Max Vacuum – 80 mbar (92% vacuum)

Max Operating – 200 mbar (80% vacuum)

Max Pressure – 1.5 bar

Max Operating Pressure – 1.0 bar

Prevention & Compliance

Prevent and Prepare rather than Repent and Repair

Our company encourages preventative measures. We developed our preventative maintenance program to assist our clients with high volume or troublesome lines; to avoid inconvenience and embarrassment of frequent blockages, unpleasant odors, or health hazards.

The program is specifically designed to meet individual/commercial/industrial requirements and offers regular scheduled maintenance of drains, sewers, septic tanks and associated sewer pipe work.

The idea is to keep the system flowing freely; thereby avoiding the serious problems associated with backups, blockages or reduced flow. It can be applied to any drainage system where regular maintenance is warranted. All pipe work is different, and the frequency and type of service depends on the amount of usage demands of your system. The considering factors are; the substance being discharged, size of building and type and size of pipe which contribute to the effectiveness of the system. Preventative maintenance can be critical in preventing costly flooding and repairs.

From your smallest home to your largest commercial property, if you are having a recurring problem, *preventative maintenance can be the answer.* Diagnosing the problem areas with routine checks and providing prompt on-site remedies, allows you to stop the problems before they can occur.

Poor pitch or poor flow, root intrusions or heavy industrial grease build up can stop a line and potentially cause extensive damage or interrupt business. Our goal is to help you maximize productivity and efficiency by minimizing downtime and repair costs.

Preventative Maintenance – (Benefits)

1. Avoids blockages which can damage property and inventory.
2. Avoids health risk from flooding.
3. Saves up to 50% of emergency prices.
4. Avoids costly backups that always occur at the worst possible time.
5. Ensures you stay compliant with local regulations.

Extends the life of your system

Septic Cleaning Services

Septic cleaning and plumping is part of a regular maintenance cycle and not only helps avoid unpleasant breakdowns, it can add also years of life to your home's septic system or your business' grease trap.

At Septic Blue, we know a clean septic system or a grease trap is a healthy one. That's why we advise all our customers in Raleigh, Cary, Chapel Hill, Durham, Wake Forest, and Knightdale to get their septic systems cleaned every 3-5 years. Call us today to schedule your appointment!

Septic Tank Needs to Be Pumped

While regular cleaning or pumping is recommended, Septic Blue understand for many homeowners this is not a realistic option. If you've gone a few years without pumping your septic system, there are a few tell-tale signs your tank may be nearing capacity.

A strong sewage odor in your yard is a dead giveaway. A backed-up toilet or drain that can't be unclogged is another sign of trouble and so is standing water in your yard. Lastly, many newer septic systems will have a built-in alarm that either flashes or makes a noise when your tank is almost full.

If you notice signs of trouble, don't delay in getting the service you need. Septic Blue offers full septic pumping services to Raleigh homes.

Septic Tank Cleaning

Why Septic Cleaning Is Important?

Like any part of the home, your septic system requires regular maintenance to stay running its best. Because it handles human waste, it is especially important to ensure your septic system is well-maintained.

If you have ever experienced an overflowing or broken septic system, you know how unpleasant the smell can be.

In addition to smelling bad, septic waste contains illness-causing bacteria, nitrogen and phosphorus that can contaminate your groundwater. This can cause health problems for your family, pets, livestock or garden. Regular maintenance saves you money in the long run.

Despite the compelling reasons for getting your septic tank inspected and pumped regularly, a large percentage of homeowners fail to perform this vital service. Don't be one of them — call Septic Blue to book your appointment today!

Highly Professional Experts

There's a reason why homes throughout Raleigh, Cary, Chapel Hill, Durham, Wake Forest, Knightdale rely on Septic Blue for septic system cleaning and other plumbing services. We're committed to offering world class customer service, from when you pick up the phone to call us to the moment the work is complete and you're handed the bill. We take care to treat your home and yard with the same respect we would our own, and our pricing is fair, transparent and surprise-free.

Great Customer Services

Of course, there's no higher form of customer service than taking the time to do a job right. Our licensed technicians have a lifetime of experience in Syracuse-area homes; even for a routine maintenance job such as septic tank pumping, we'll take extra care to ensure the job is completed thoroughly, so you can enjoy years of trouble-free use. Give us a call today!
